## Twin Cities Workshop Series

Identify patient nutritional need Without-A-Doubt

Demonstrate that need to your patient Without-A-Doubt

Gain the confidence to offer nutritional support Without-A-Doubt

Series

# Without-A-Doubt Workshop

Using Simple In-Office Lab Testing To

Identify patient nutritional need Without-A-Doubt

Demonstrate that need to your patient Without-A-Doubt

Gain the confidence to offer nutritional support Without-A-Doubt

Although each of the modules can be taken as stand alone sessions, a greater understanding will take place if they are taken in sequential order. This will maximize your understanding of the cross-validation of the tests. You will learn how subjective symptoms will correspond to palpated reflex points which will then be confirmed by in-office tests and finally confirm with more traditional lab testing.

The beauty of this system is that seemingly unrelated pieces of information form a comprehensive picture allowing you to know with confidence that you are treating the right area.

Without A Doubt will provide the practitioner with practical hands-on knowledge that you will be able to take back into the clinic and use on Monday. The program is the result of trying to develop a logical, simplified, organized approach to tackling a patient's complex health picture. When you correct the foundations, the rest will generally fall into place.

No more chasing a patient's symptom picture. You will have the effective tools to methodically and logically navigate your way through the patient's myriad of symptoms. Without-A-Doubt!

*Please note new start time*

**Thursdays 3:00 - 6:00**

After each workshop session, attendees will be highly confident in their ability to diagnosis and nutritionally support the dysfunctions workshopped.

I strongly encourage you to attend the first session to see if this "course" is for you. This material could take your practice to a whole new level, I guarantee it.

Dr. Peterson

## Attend One Session Or Attend Them All

**Thursdays 3:00 - 6:00**

*Please note new start time*

### Session 1 - Thurs Set. 21<sup>st</sup>

#### Patient Intake & Diagnosis

In this session we will review the top 30 Biotics best selling products. It will be in an depth review of Biotics' best sellers and how and when to use them with clients. We will spend time answering questions and applying the supplements and subsequent protocols to actual situations in your practice.

Its invaluable to know what products are consistently working for other practitioners, and how they are using them with patients. Biotics' 30 top selling products are the best of the best!

In this session we will also review the client intake process and how to use different intake Questionnaires. We will also review the difference between a "metabolic reset detox" and a targeted viral or bacterial detox, and when and how to use each. Bring your cases and we will work through them.

### Session 2 - Thurs Oct. 5<sup>th</sup>

#### Digestive Diagnosis & Support

In this session we will discuss digestive dysfunction and learn how to properly identify digestive dysfunction before an actual pathological condition occurs. You will learn palpatory and reflex techniques from chiropractic, naturopathic, osteopathic and allopathic medicine. These simple tests will identify digestive problems such as: HCl deficiency, pancreatic enzyme deficiency, gallbladder dysfunction, small or large intestine problems. You will then learn a simple in-office laboratory test that will further confirm your treatment recommendations, without-a-doubt. After this session, attendees will be highly confident in their diagnosis and support of digestive dysfunction.

### Session 3 - Thurs Nov. 2<sup>nd</sup>

#### Blood Sugar Diagnosis & Support

Attendees will learn effective testing procedures to identify and differentiate between different types of sugar handling problems including reactive hypoglycemia, dysinsulinism and diabetes. Breakout sessions will include work-shopping these simple tests to identify the underlying mechanism, along with some simple in-office tests to confirm your findings. The emphasis will be on practical hands-on procedures that can be implemented the next day.

### Session 4 - Thurs Nov. 30<sup>th</sup>

#### Musculo-skeletal Problems

In this workshop attendees will learn to perform simple tests to identify mineral and EFA deficiencies which may contribute to musculo-skeletal conditions. Learn how specific nutrients may accelerate the healing process and provide above-normal healing rates, and how others may actually worsen your patient's condition. You will feel confident and equipped to assess musculo-skeletal issues and injuries, and prescribe the appropriate nutritional support to enhance performance and improve healing from injuries without a doubt.

**SIGN UP NOW >**

### Session 5 - Thurs Jan. 11<sup>th</sup>

#### Immune & Cardio Diagnosis & Support

In this session attendees will learn the assessment and proper nutritional support of the immune system. Problems encountered such as autoimmunity, cancer, and chronic immune system deficiency will be discussed. You will learn highly effective nutritional protocols to deal with chronic diseases affecting the immune system.

Despite all of our medical advances, one out of every two people will die of cardiovascular disease this year. Years before disease becomes manifested, the body gives clear indications of functional weakness and dysfunction. Learn how to easily screen patients for cardiovascular weakness. In this session you will learn how to evaluate and confidently intervene with the appropriate cardiovascular nutritional support. We will also review the latest research on cholesterol and its true role in heart disease as well as novel ways to assess and reduce the unwanted effects.

### Session 6 - Thurs Feb. 8<sup>th</sup>

#### Neuro. & Endocrine Diagnosis & Support

Neurotransmitters and Endocrine systems – In session 6 we will take an introductory approach to the roles of neurotransmitters and hormones, and nutritionally repairing and restoring function to their respective endocrine gland or system. It has been said "you are only as happy as your hormones"; you will come away with an understanding of these systems and the powerful nutritional tools you will now have.

### Session 7 - Thurs March 8<sup>th</sup>

#### Hormones, Adrenal, Thyroid Diagnosis & Support

We will specifically cover male and female organ systems as well as the adrenals and thyroid. Emphasis will be placed on the functional aspect of these organ systems and their impact on health. Attendees will come away with a clear understanding of hormonal dysfunction, and will know where to begin working with patients on Monday morning. In a breakout session, hands-on training will be work-shopped to systematically identify the areas of hormonal imbalance, the underlying causes, and nutritional support specific for each individual patient. We will also cover appropriate salivary, blood and urine testing.

**Session 8 - Thurs April 5<sup>th</sup>      Improving Genetic Expression**

We are not a slave to our genes! We are born with approximately 20,000 genes; however, much of the way in which these genes are expressed is influenced by other factors or “Epigenetics”. In this session you will learn about these factors that affect gene expression and how you can identify and modify them. Attendees will learn simple in-office tests to identify potential problems. Lifestyle modification, diet and nutritional strategies to improve genetic expression, will be explained in detail.

**Session 9 - Thurs May 3<sup>rd</sup>      In Office Saliva & Urine Tests**

In this session we will continue the discussion of the physiology and therapeutic value of the in-office tests and how they will aid you in handling chronic degenerative disease. We will review the prior sessions to make sure clinicians have a working knowledge of how to apply the tests and understand the hierarchy of which test results to treat first. Participants will be asked to perform tests upon each other; and test kits will be available to perform tests upon themselves. This session puts the individual pieces together and helps the clinician form a comprehensive picture to instill confidence to know you are treating effectively.

**Session 10 - Thurs May 31<sup>st</sup>      Putting It All Together - Chronic Disease**

In this session we will literally “Put It All Together”! This will be much more than a summary or recap of previous sessions - which we will do. We will look at what may appear to be difficult health problems, and how to break them down into manageable conditions. We will discuss the entire case management of a patient/client from the initial phone call, to the discharge, to maintenance nutritional protocols – Without A Doubt! I will also be presenting several cases for discussion on where to begin and how to end with a successful outcome.
