CE Credits Are Included

Dr. Devaki Lindsey Berkson

is considered a pioneer leader in Functional Medicine. Dr. Berkson has been lecturing for CMEs to MDs, pharmacists, DCS, NDs, and nutritionists for more decades than her ego wants to admit. She is the author of 21 books and has a soon-to-be released new book on Oxytocin.

Dr. Berkson wrote one of the breakthrough books on endocrine disruption. Based on this book, *Hormone Deception* (McGraw-Hill 2000 Awakened Medicine Press 2016), she was invited to be a distinguished scholar at an estrogen think-tank at Tulane University (Center for Bioenvironmental Research) where she studied with the scientists that discovered the first two estrogen receptors and launched the EDC field.

Dr. Berkson's book *Healthy Digestion the Natural Way* (Wiley 2002) was the first gut, nutrition, spirituality digestion book and a long-time best seller. Its sequel is a breakthrough book creating a new field — Nutritional Gastroenterology.

One of her latest books, *Sexy Brain*, warns of environmental castration and how sex steroid hormones rule the brain.
